

THE COLLIS CURVE DEMONSTRATION PACK

Collis - Curve™

Dental practitioners, charities, and others who have been recently introduced to the Collis Curve toothbrushes may want to assess them. This pack is designed to help them do that. It contains one example of each of the five styles of brush, together with a leaflet that explains them all. Using packs like these and sharing them amongst colleagues has allowed several community dental teams to explore the brushes uses. One group trialled the soft brush with chemotherapy patients and got an excellent result, this brush is also useful for people suffering the dental problems associated with HIV Aids. The others are helpful for adults and children with a wide range of disabilities. These include autism, Down's Syndrome and PSP as well as Cornelia de Lange Syndrome, old age, and many others too.

If you would like to buy one of these packs please contact us as below. We look forward to hearing from you.
