# The unique Collis-Curve™ logo Toothbrush

**A toothbrush  
designed for Special  
Care Dentistry.....  
and for everybody else too!**

---

**Removes up to 40% more plaque and improves  
gingival health by up to 68% when compared to  
a conventional toothbrush** (ADA clinical trial)

If you have difficulty in brushing your teeth, or if somebody else has to brush them for you then the simple backwards and forwards brushing technique means that the unique shape of the Collis Curve's bristles gets immediately to work removing plaque from all the surfaces of the teeth simultaneously, gently working below the gum line and stimulating circulation and general gum health. Clinical trials in the USA demonstrate its superiority with both disabled adults and children. In the UK a wide range of users dealing with Special Needs and disability are now using the brush, including divisions of the NHS.

The brush comes in five formats and covers babies, children, adults with sensitive mouths, people with recessed gums and those in a normal, healthy condition. Patients can buy it directly online, and dental professionals and bulk users can obtain wholesale terms either directly or from the website.
